GUIDE

TO A GOOD BOOT CARE

5168-1K
EO 2.0
size run
36-48

1

FOR SKIING ONLY

This boot was designed to be the ultimate XC racing ski boot. • The boot is designed for maximum skiing performance. • We use carbon parts, which have been shaped to create the perfect balance between performance and fit. • Carbon adds stiffness and support where it's most needed, and is extremely lightweight - but needs special care, particularly when not out on the trails.

2

WHEN NOT ON THE TRAIL, ALWAYS USE OVERSHOES

Always use the boots together with the overshoes when not skiing. • Direct contact with concrete, asphalt, ice, sand, rock, stairs and any sharp objects can damage, even break the carbon outsole.

3

DO NOT BEND OR TWIST THE BOOT BY HAND

Never bend or twist the boots by hand. • Extreme bending or twisting of an empty boot (as shown in the figure) can result in damage, even breakage of the carbon elements. • Always put the boot on to get a feel for its remarkable flex characteristics.

4

DO NOT KNOCK THE BOOTS TOGETHER

Before stepping into the ski binding, clean the carbon sole carefully, by hand. • Similarly, clean the snow and dirt from the sole cleats by hand or with a ski pole. • Do not tap or knock the boots against each other or any other hard or sharp surfaces.

5

TRANSPORT BOOTS WITH CARE

During transport, always make sure not to place heavy bags or other heavy objects on top of the boots. • This could damage the carbon cuff or the carbon outsole.

HELPFUL HINTS FOR PROPER USE AND CARE

TREAT YOUR BOOTS WITH CARE | Clean boots with a soft, moist cloth or soft brush and water. • Never use chemical cleaning agents nor wash in a machine.

FOR LONGER PRODUCT LIFE | Boots should be cleaned on a regular basis. • Boots should be dried after each use to prevent the build-up of odours.

DRYING THE BOOTS | Dry at room temperature, without the aid of an external heat source. • Stuff boots with old newsprint; place at a safe distance from a mild source of heat - never in direct contact with any heat source; remove wet newsprint and repeat.

ANATOMY OF INNOVATION

ONE-PIECE CHASIS

CLASSIC ACTIVE EDGE WITH ALPINA SSR CLASSIC SOLE
 Extremely light anatomic and ergonomic carbon-made Active Edge & soft flex chassis construction with directly integrated TPU-made NNN compatible toe & heel plate. One-piece chassis construction provides maximum longitudinal stiffness and stability, superior responsiveness and power transmission by the foot to the ski, with free heel & adaptable heel pocket construction for minimum heel stress and optimal fit.

SKATE ACTIVE EDGE WITH ALPINA SSR SKATE SOLE
 Extremely light anatomic and ergonomic carbon-made Active Edge & hard flex single-piece chassis construction with integrated TPU-made NNN compatible toe & heel plate. Chassis provides maximum longitudinal stiffness and lateral stability, superior responsiveness and power transmission by the foot to the ski, with adaptable heel pocket for optimal foot and ankle fit.

SOLES

All Alpina XC boot soles are NNN compatible. Sole type and construction are chosen individually for each boot based on boot features and functional requirements.

NNN XCELERATOR
 Top racing sole with neutral foot position provides more direct power transmission; light, with optimised flex and torsional stiffness; different hardnesses for skate and classic shoes; PEBAX-made.

NNN R3
 First generation racing sole; still offers similar technical & functional characteristics as other, newer soles; with neutral foot position and different hardnesses for skate and classic shoes; TPU-made.

NNN T4
NNN T3
 TPU-made sole with good power transmission, softer, more comfortable flex and good walkability.

NNN BC
 Sole with optimum support in difficult terrain; reliable walking thanks to non-slip profile.

VIBRAM 75MM
 Standard Vibram 75 mm sole; provides excellent support in difficult terrain; non-slip profile with specially made rubber mixture.

HEEL COUNTERS

FULL CARBON ACTIVE EDGE
 Extremely light. Improves the torsional stability of the boot and provides excellent grip and foothold in the heel. With its Active Edge construction adapts to various types of heel and heel shapes.

CARBON + TPU
 Carbon stabilizer provides torsional and heel counter stability inside and out; in combination with TPU adapts to various types of heel shape. All combine to deliver excellent grip and foothold.

TPU
 The TPU heel counter provides good grip, stable foothold in the heel, prevents heel movement, and adapts to various foot shapes and heel volumes.

HEEL FIT ADJUSTEMENT

Simply use the control handle to adjust the boot heel shape, which allows individual adjustment of the heel grip between the shoe and the heel, providing more comfort while running.

SOFT

MEDIUM

STIFF

FLEX

The skate technique demands a hard flex sole, while the classic technique requires soft flex sole characteristics in the shoes metatarsal area. The Skate design also employs stiff flex component parts and materials, while both the Classic and Combi type shoe design employ specifically soft flex component parts and materials that deliver maximum power and control. Back Country employs a medium flex sole and components to deliver a more flexible, accommodating ski experience.

INNER-SHOE FIT

FIT

The design and shape of the internal 'soft' part of the shoe provides optimum grip, the narrow Race cut to the wider Comfort fit; the range is rounded out with the medium Dynamic fit that falls between the two extremes. All fit configurations take into consideration higher and lower variations in foot form.

RACE
DYNAMIC
COMFORT

OUTERSOLE

CUFFS

The skating technique requires more lateral ankle support for improved performance. So the boot has an externally fixed cuff, which provides rigidity and lateral stability to the ankle, to gain better responsiveness with optimal grip. Cuffs are made of carbon (which are extremely lightweight) or plastic. All are anatomically and ergonomically designed, employ a 'Velcro' power strap (some with EV-padding) and are attached to the heel counter with rivets or screws.

FULL CARBON

The anatomic full carbon cuff is extremely light and delivers maximal stiffness and superior lateral responsiveness. EVA-padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

CARBON

A light anatomic carbon cuff delivering exceptional stiffness, lateral stability and responsiveness. Equipped with a power strap for optimal ankle fit, superior comfort and adjustable ankle grip.

TPU SKATE

Thermoplastic polyurethane provides good stiffness and lateral stability, while the power strap provides superior comfort and adjustable ankle grip.

TPU COMBI

The COMBI boot is designed for the classic technique. It has a softer flex sole, and is equipped with a cuff that provides less experienced skiers with more lateral support and stability to the ankle, and can be adjusted to the desired level of comfort.

GAITERS

One-piece seamless gaiters cover the shoe and lower leg completely. Gaiters are water-tight, with a water-tight zipper and elastic, and protect against cold, water, moisture and snow. And the boot instep is adaptable to different foot shapes.

PVC NEOPRENE

PVC is strong and lightweight, soft and flexible, and highly durable, while neoprene maintains good flexibility over a wide temperature range and offers good insulation against both wet and cold.

4DRY PVC 4DRY WEAVE

4DRY PVC with its perforated PVC construction and 4DRY WEAVE with its woven textile configuration makes the boot water impermeable and allows it to breathe. Water vapour passes out of the boot, so the boot interior stays warm and dry for maximum comfort.

ELASTIC INSERT

For gaiter adaptability to various lower leg shapes.

MATERIALS

LACING

45°

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique.

ANATOMIC FOOTBED

Insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improves the thermal insulation of the shoe.

ALPITEX MEMBRANE

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. Even under extremely cold and high-humidity conditions it provides the foot with maximum thermal comfort.

ELITE 2.0

ULTRA LIGHT CARBON CONSTRUCTION,
ULTRA HIGH PERFORMANCE

The world's lightest, most responsive ski boots are changing the way we ski - and win.

TORSIONAL STABILITY

ESK 2.0

The single-piece all-carbon anatomic 'Active Edge' skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ACTIVE EDGE

Active Edge consists of a special sandwich of inner and outer carbon textile layers combined around a rubber mid-layer for maximum chassis adaptability to various types of heels and heel shapes together with maximum power and total control.

FREE HEEL

Free Heel construction virtually eliminates heel stress, providing the skier maximum comfort.

ECL 2.0

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

SKIS

FEATURES

ULTRA LIGHT WOOD CORE

A laminated high quality wood core with air channels saves weight, increases durability, and improves pressure distribution

ULTRA LIGHT WOOD CORE EDGE

Wood core with all the characteristics of the ultra-light wood core designed to ideally suit steel edge skis

SS810 PE BASE

PE base material ideally suited to the SOLLTE pattern for superior waxless performance

HM GRAPHITE BASE

Graphite base with high molecular weight contains wax-based additives ensuring good glide. This base requires regular application of glide wax; ideally every day you ski

PE BASE

Developed to suit the needs of occasional skiers requiring little to no maintenance

MULTIGRIP EMBOSSED BASE

A combination of various grip technologies for efficient power transfer and optimum glide

SOLLTE GRIP BASE

Developed for better climbing and gliding in all snow conditions and ideally suited to backcountry skis

SKIN TECH BASE

Made of 65% mohair and 35% nylon Alpina's Skin Tech base delivers the perfect balance of glide and grip in virtually all conditions. No special maintenance is required and skin segments are easily exchangeable.

STEEL EDGE

Steel edges significantly extend the ski life and greatly increase control in icy and ungroomed conditions especially when descending.

POLES

FEATURES

XC COMFORT STRAP

New – Biathlon style, easy adjustable loop.

TEXTILE STRAP

Strong adjustable strap delivers comfort and weight distribution around the wrist.

CORK GRIP

Ergonomic natural cork grip for warmth and feel.

PE GRIP

Dual material ergonomic grip with soft foam for greater warmth.

ALUMINUM 7075

Our shafts, made of aircraft quality Aluminum alloy 7075 are strengthened and tempered, for maximum quality, and lasting durability.

ALUMINUM 5083

Our shafts made with Aluminum alloy 5083 are made in Italy and each tube is checked by our exacting robots and our technicians to ensure the highest quality

XC CARBIDE TIP

Carbide tip for lasting performance

STEEL TIP

Steel tip for value and durability

XC TOURING BASKET

Good support and grip both on and off track

XC BC BASKET

Greater surface area for deeper softer snow conditions and a carbide tip for durability and grip when its icy
