WINTER GLOVES

NEW

100 PROOF

OUR WARMEST GLOVE,
FEATURING A WATERPROOF SPLIT
FINGER DESIGN FOR RIDING IN
FREEZING WET, COLD CONDITIONS

The waterproof, breathable outer shell has a zippered pocket for hand warmers, and a combination of **PrimaLoft®** and **Thinsulate™ XT-S** form an insulated core for maximum warmth. The interior lining utilizes **AGrid™** technology with **X-Static®** silver fibers to hold heat. The palm is a durable **Clarino™** synthetic, with **Touchscreen Technology™** that allows you to use mobile devices without removing the glove. Altogether, it's a double dose of warmth and weatherproofing that won't weigh you down.

WOMEN'S SERIES

WHAT IS DIFFERENT ABOUT GIRO GLOVES?

Every rider benefits when equipment fits and feels like a part of them. With innovations like our unique 3-panel palm design and better materials like Technogel®, Pittards® leathers and Poron® XRD™ armoring, Giro's range of road, dirt, winter and recreational gloves provides enhanced comfort and control that you can feel, every time you ride.

HOW DO GIRO GLOVES FIT?

Giro gloves are based on our proprietary Super Fit™ Engineering process that combines research data on human anatomy with hand-crafted refinements and a "tailored" construction. The result is a snug, near-custom feel with the support of modern materials that improve comfort and control on the bike. We offer gloves in a full range of up to 6 unisex sizes, 3 women's sizes, and sizes for kids under 12, so that almost any rider can find a glove that fits and feels like a part of them.

WHAT ARE THE DIFFERENCES BETWEEN MEN'S AND WOMEN'S HANDS?

Women's hands typically have a smaller palm girth and width, smaller wrist diameter and narrower fingers when compared to men's hands.

HOW TO GET THE CORRECT GLOVE SIZE.

Giro Gloves are available in unisex and women's sizes that are tailored to the needs of cyclists. To determine your glove size, wrap a measuring tape around your dominant hand, just below your knuckles (excluding your thumb), and make a fist. This measurement is your "hand width" glove size. Since every hand is unique, use the chart below as a guide, but allow for some variance based on how the glove fits!

WHY DOES GIRO USE A 3-PANEL PALM?

The human hand is an amazingly dynamic instrument, with strength and dexterity that is essential to a rider's control of a bike's handling, shifting and braking. Our 3-panel design tailors the palm of the glove to

better fit the contours and articulation of the hand, and optimizes the location of padding, material and seams to enhance your comfort, grip and control of the bike.

FEATURES AND BENEFITS OF GIRO 3-PANEL PALM:

Proprietary unisex, women's and kids' sizes are designed specifically for cycling, to conform to the hand naturally when gripping a handlebar without binding or excess bunching.

Tailored 3-panel palm construction orients fabric and padding more precisely, optimizing comfort and performance for maximum control.

WHAT ARE THE DIFFERENCES BETWEEN LEATHER AND SYNTHETIC GLOVES?

Giro makes gloves in many configurations including classic all-leather designs, modern synthetic / natural hybrids and all-synthetic designs. Each glove is designed as a system to provide the best fit, comfort and performance for riding.

- Natural leathers provide a very supple feel and aesthetic, with the ability to break-in and form to the rider's body. With proper care, they can also be durable enough to last several seasons.

- Synthetic gloves provide a supple feel and modern aesthetic, with the ability to breathe, stretch and conform to the rider's body across a wide range of conditions. They are very durable, and require less attentive care than natural leathers.

- Hybrid designs, with a natural leather palm and synthetic upper, combine the best attributes of both materials. They are light, supple and breathable, with the ability to break-in and conform to the body.

- Winter gloves generally use synthetic materials to resist the elements and harsh conditions of winter riding, while insulating the body from cold and wet. We use modern insulating materials, including synthetic insulation and wool-blend removable liners where appropriate, to provide the best comfort and performance possible.

Also note that some Giro glove models have a slightly more "snug" fit when new, so you may need to size up from the size you usually wear or allow them some time to "break-in" for a perfect fit.

GIRO UNISEX GLOVE SIZES

See Page 72 for complete glove sizing charts.

DO ALL GIRO GLOVES FIT THE SAME?

Since our full glove line covers so many different needs and conditions, we may make adjustments to some patterns in order to create the best glove possible for each type of use or conditions. While we strive for the most consistent feel possible, this means that certain gloves may feel different than others. For instance, leather gloves will stretch and "break-in" with time and use, so they may feel snug when new compared to similar synthetic glove designs. Also, winter gloves are designed to have a little more interior volume in order to trap heat, so they may feel roomier than a comparable mountain bike or long-finger road glove.

HOW SHOULD I CLEAN GLOVES?

Cleaning Synthetic Gloves

For best results, clean the gloves using lukewarm water and a mild liquid soap or cleaner, and allow to air dry away from direct sunlight. When almost dry, you can put the gloves on to give them shape.

Cleaning Leather / Leather Palm Gloves

For gloves with leather, extra care will help to extend the life of the glove, and a good leather conditioner can help to keep the leather supple since washing can damage it.

STEP 1: Use lukewarm water and mild soap to gently wash the glove (you can wear the glove while washing to help maintain the glove's shape)

STEP 2: Gently pat dry with a towel to remove excess water

STEP 3: You can put the gloves on to give them shape, and then gently remove them. Make sure they are laid flat.

STEP 4: Hang to air dry away from heat or direct sunlight

STEP 5: When almost dry, you can put the gloves on to give them shape. You can also gently rub a good leather conditioner into the leather to help keep it supple
Note: Never dry clean, bleach or tumble dry!

PROPERLY STORING GLOVES

After each use remove the gloves carefully, lay them flat, and allow the gloves to air dry in an open area. Then store in a cool, dry place.
Note: We strongly discourage leaving used gloves in damp, enclosed spaces (like the bottom of a gear bag) since that can inhibit proper drying and cause the leathers or other materials to become stiff or brittle.

NEW

WESTERLY WOOL

**A SIMPLE, STYLISH WOOL GLOVE
THAT WORKS WELL BY ITSELF
OR AS AN INTERIOR LINER WHEN
TEMPS DIP BELOW FREEZING.**

The *Westerly Wool* features a *Merino* blend fabric and longer body length to take the edge off of cool conditions. With reinforced contact zones and silicone detailing on the palm it's the right choice for short commutes in cool weather, hanging around the campfire or anytime you want an extra layer of warmth.

SHELL:

Blended, MAPP™ Performance Merino™ wool fabric

Silicone detailing on the palm for enhanced grip

Reinforcement zones in cockpit contact areas

Reflective highlights

INTERIOR:

Blended, MAPP™ New Zealand Merino wool fabric

SIZING:

XS, S, M, L, XL, XXL
